

Usage Examples & Workflows

Example workflows

- Send a quotation: user says 'send quotation to John for 25 laptops' -> Sales Agent finds the customer, lists approved quotations, sends the quotation email, records an activity.
- Invoice paid automation: customer pays via Stripe payment link -> workflow generates a receipt, updates the CRM, notifies the sales team, sends a thank-you email, and schedules a follow-up.
- Meeting intelligence: transcribe meeting audio (Whisper), summarize it, extract action items, and create tasks.
- Department chat isolation: sales users chat with the AI Sales Assistant, finance with the AI Finance Assistant, and conversations are scoped per department with admin visibility.
- Document Q&A:: upload PDFs into the knowledge base, the search_knowledge tool retrieves relevant chunks via pgvector and the agent answers with the company knowledge.
